Aluroc colour options

Our aluminium door ranges are available in any RAL colour, including different colour options inside and out. We also offer a range of textured finishes.

All of our doors use a marine-grade finish as standard. That means that finishes will stand up to the toughest conditions including coastal locations.

Smart thinking

Aluroc and Decoroc by Deceuninck are dedicated colour ranges which allow you to choose a perfect colour-match across its' aluminium (Aluroc) or PVC-U (Decoroc) window ranges.

Ultra-tough, and scratch and impact resistant, the patented system gives you new flexibility to 'mix-and-match' Decalu aluminium doors alongside PVC-U windows, while guaranteeing an identical finish.

Made sustainably. Helping you to live more sustainably.

Decalu by Deceuninck Aluminium bi-folding, French and lift-and-sliding doors are made to exacting standards, minimising waste through precision manufacture.

Components from the high-grade aluminium we use to thermal reinforcements, are 100% recyclable.

We're also helping to take single-use plastics out of circulation by bringing waste-water bottles back into use in our advanced thermal breaking technologies.

This helps us to make your new door ultra-energy efficient, offering u-values (the measure of heat transfer) of as low as $0.68W/m^2K$, so your home loses less energy.

Each Decalu door or window frame contains 12-14 recycled PET bottles in its thermal inserts!

Sophisticated understated elegance.
Next generation performance.
